

17" Wide Screen Digital Advertising Display Model 7103

16:9 aspect ratio

Present your products or services in an engaging and fun way. This 17" Digital Advertising Screen has a built-in flash card video player to loop your promotional videos. Forget the days when you needed a TV and a DVD player to present your promotional videos or trailers.

Simply store your MPEG video, JPEG images or MP3 music on a compact flash card and insert it into the port at the top of the screen. Because our digital advertising screens are created using solid state digital circuitry they are built to last in a harsh retail environment. Content can be easily updated by switching out the flash card or updated through the USB slot on the side of the screen.

Our commercial grade digital advertising displays are designed for public / retail usage. These advertising LCDs are inside a heavy duty metallic housing with a protective screen that prevents the display from being damaged. Both the 17" & 19" versions can be programmed to turn on and off using the built-in timer function.
