

Video Poster Display

Model 7100

Video Poster Display

Rather than using static print advertisement for your business, we have found the perfect solution to that problem! Our slim Video Poster Display is renovating and possesses the ability to give updated information to your customers easier and faster. This light weight screen can be hung from the ceiling or mounted to a stand.

To update the content on the screen, the store can simply insert a USB thumb drive to upload new video content to the unit then remove it from the unit. By using a USB thumb drive, there is no possible way that you can damage the unit when you insert or disconnect the thumb drive from the display. Making it a more easy efficient process. Graphics can be changed out on both the back and the entire front around the video screen.
